TO WHOM IT MAY CONCERN

The STOA Panel strongly endorses "World Wide Views on Global Warming" and hopes that individuals, institutions and organisation across the world will support the project in order to contribute to its success.

As Members of the European Parliament we are looking forward to seeing the results, which we consider a most valuable input to political discussions on global warming.

Global warming is going to affect us all, and we therefore welcome this historic effort to let citizens from all parts of the world debate and present their views on what decisions should be made in COP 15. Global warming policy is an issue that resides in the interface between science, technology, governance and public opinion, and STOA greatly values initiatives to promote debate in this interface.

The STOA Panel has been cooperating for several years with one of the initiators of the project, The Danish Board of Technology, and is confident that they possess the skills necessary to organise a project of this magnitude and level of ambition.

On behalf of the STOA Panel

Philippe Busquin  
Chairman

Malcolm Harbour  
Vice-Chairman
